

LISTER RODRIGUEZ

AI Automation & Systems Developer

PO4a, Malaybalay city, Bukidnon Philippines | listerrodriguez8@gmail.com | 09635848300

PROFILE

BSIT graduate with hands-on experience in software development, web application development, system design, and deployment. Built and deployed multiple academic and personal projects over 3 years of programming experience, including a capstone system where I handled core development, implementation, and deployment. Completed a Software Quality Engineer internship focused on software testing, debugging, and application reliability. Experienced in automation workflows using n8n, AI-assisted content production, video editing, and operational workflow management in real-world environments. Strong foundation in full-cycle development, problem-solving, API integration, and automation systems from development to production.

AREAS OF EXPERTISE

-
- AI Automation
 - Web Developer
 - Machine Learning
 - Project Management
 - Operational Management
 - Software Quality Engineer
-

PROFESSIONAL EXPERIENCE

YouTube Content Automation & Hiring Manager, Casgains Academy

Feb 2025 to May 2026

Chicago (Remote)

Responsible for managing and optimizing a YouTube content automation workflow, including content editing, AI-assisted video production, thumbnail creation, and team coordination. The role also includes hiring, evaluating, and assigning tasks to new content creators and editors to ensure consistent production output and quality standards.

AI Automation Core Mind Technology- Alex Jennings

March 2025 to Jun 2026

Core Mind Technology (Remote)

Responsible for designing, testing, and deploying automated workflows using n8n to streamline business processes. The role focuses on building automation systems that connect APIs, tools, and databases to reduce manual tasks and improve operational efficiency.

Software Quality Engineer - Intern, Ronald Rhey P. Miñoza

Feb 2026 to May 2026

Malaybalay (Hybrid)

Worked as a Quality Engineering Intern focused on ensuring software reliability and performance through both manual and automated testing processes. The role involved validating APIs, writing test documentation, and developing automated test cases using industry-standard testing frameworks. Helps with testing API, documentation manual testing, automated testing using pytest - bdd, finished as one of the top of our batch on that company

EDUCATION

Bukidnon State University, Malaybalay

Aug 2022 to June 2026

Bachelor of Science in Information Technology

I completed a Bachelor of Science in Information Technology (BSIT), where I gained 3 years of hands-on experience in software development, web and application building, system design, and basic game development. Throughout the program, I built and deployed web applications, worked on programming and database projects, and studied key areas such as software engineering, system analysis, and basic marketing.

My most significant achievement was my capstone project, where I took full technical responsibility for designing, developing, deploying, and defending an entire system within a group project. I successfully delivered a working, production-ready system that was presented and published as part of our requirements. I also completed a Software Quality Engineer internship, where I performed testing, identified bugs, and ensured software reliability before release. Overall, my BSIT experience combined academic learning with practical development, deployment, and quality assurance experience across real-world projects.

TECHNICAL PROFICIENCY

Programming & Web Development:	Intermediate experience in JavaScript and full-stack web development, including building and deploying web applications, working with frontend and backend logic, and handling API integration and database operations.
Automation & AI Systems:	Practical experience designing, testing, and deploying automation workflows using n8n, including API-based integrations and workflow optimization. Exposure to AI-assisted systems and content automation pipelines.
Quality Assurance & Debugging:	Worked as a Software Quality Engineer Intern performing testing, bug identification, and system validation to ensure application reliability and performance.
